## Core Competencies

- Rebar detailing by Construction Drawing
- Project Coordination
- Precise Production
- Just-In-Time Delivery

## Values of Off-Site Cut and Bent Reinforcement

### • Reduce wastage

- Unused scrap (approximately 10%)
- Deterioration of standard length bars
- Pilferage risks of standard length bars

### • Improve site management

- Ease on-site workers, quality and safety control
- Optimize site space: storage and machinery
- Reduce handling process: crane and manpower

### • Hassle-free solution with pre-planning

- JIT delivery
- Speed up work progress at site
- Weather independent

### • Quality and traceability

- Standard specification for cutting and bending
- Bar list as controlled document and final measurement
